

1. Set up the Xpressions units. Position them in the configuration of your specific layout and leave space between them for the installation of the connex shelves for your specific design.

**NOTE:** Depending on the complexity of your Xpressions CONNEX displays layout additional assistance might be needed with the installation of connecting skins and inserting CONNEX shelving (EX. additional people or a ladder/step stool for assistance.)

2. Attach the connecting skins to the Xpressions units.

3. Locate the CONNEX shelf clips by the hubs on your display.

4. Start with one side of the shelf. Place the front corner of the shelf on the appropriate clip then lower the back corner into its clip. Lower the other side of the shelf into place onto its clips. Repeat for the rest of the connex shelves.

5. Place all CONNEX shelves into place to complete your Xpressions kit.
